

Press Release

Athens, July 16, 2024

Space Hellas has undertaken the technological upgrade of the Ionian University

Following an international tender, Space Hellas undertook the project: "Provision of equipment and systems to upgrade the network infrastructure and ensure the operational continuity of the Ionian University".

The project involves the modernization of the infrastructure of the Ionian University and the adoption of appropriate technical measures to limit the risk of breach or destruction of its information systems and data, while aiming at the implementation of a plan to ensure its operational continuity.

As part of the implementation of the project, Space Hellas has undertaken the procurement, installation, configuration and commissioning of a new server arrangement of modern modular architecture and the necessary suite of cloud infrastructure applications (VMware), two new storage systems and two new integrated backup systems. The above solutions are implemented with products from the manufacturing company Dell Technologies and ensure the continuation of the University's business operations.

To further protect the data of the Ionian University, Space Hellas has chosen:

- the installation of security devices (Firewalls/UTMs) in all sites of the academic institution, including the Central Management Console
- the integrated Network Access Control (NAC) solution for controlling user and device access to University resources, as well as the necessary user access permissions via virtual private networks (VPNs) for secure remote access
- the integrated multi-factor authentication solution (MFA - Multi Factor Authentication) for greater assurance of remote user access
- the multi-level security solution for user terminals (Endpoint Security Solution) and their protection against malicious software and
- the integrated security solution for users' email accounts (Email Security).

In addition to its secure DNS provider service, it offers a first line of defense against online digital threats. The Ionian University's holistic approach to cybersecurity is implemented with products and services from Cisco.

Space Hellas S.A.

Telecommunications, IT, Security Systems and Services – Provision of Security Services Private Enterprise
312 Mesogion Avenue, 153 41 Ag. Paraskevi, Athens, Greece – General Commercial Registry Number: 375501000

Press Release

The Ionian University, a leading player in shaping the international agenda for the sustainability of universities, has taken an important step towards achieving the Sustainable Development Goals to which it has committed itself through the Charter of Greek Universities, entitled "The Greek Universities as Lighthouses of Sustainability" (2022-2030).

The technological upgrading of the Ionian University will achieve the modernisation of its systems, the holistic response to digital threats and breaches, while ensuring its operational continuity.

Presenting 39 years of experience, Space Hellas has successfully completed many complex projects, applying the high level of know-how in combination with innovative technological solutions from leading construction companies, adapted to the needs of large organizations and enterprises, with the aim of their smooth and secure digital transformation.

About Space Hellas:

Space Hellas is a leading Digital Integrator and value-added Service Provider with an international presence in the ICT sector. It has been active since 1985 in the field of high technology with the aim of creating new data in the journey of digital transformation of modern enterprises and organizations. www.space.gr
